# Public Systems & Solutions

## Flexible management of entrance control

«On peak days our stadium is filled to overflowing: up to 45 000 fans come to follow the match live. Admitting such huge numbers of people within such a short space of time requires careful management and efficient systems are needed to ensure reliable checking of ticket validity and effective entry control. Kaba has created a different solution for each entrance, in each case taking into account the expected throughput rate and the required level of security.»

# Public Systems & Solutions

Kaba's Public Systems & Solutions division provides specific solutions for the controlled entry of visitors to public and leisure facilities. Reliable, fast and user-friendly equipment is an essential requirement. Kaba supplies suitable tripod barriers, turnstiles or special units in a variety of versions to match your needs: throughput rate, required level of security and setting. Our PSS products are compatible with virtually any ticket management system - from plain barcode tickets and cards to VIP-passes with biometric features.

We recommend automatic half-height doors in matching design to provide access for people with reduced mobility.

# TPB tripod barriers

Kaba tripod barriers are TÜV approved for use in emergency escape routes and can be controlled from a central building management system. The tripod turns using a minimum of force in order to maintain pedestrian safety. Power-assisted versions feature a patented fold-down device with automatic reset - a practical function, especially for stadiums and large venues with many units. In the case of an emergency the upper bar folds down automatically, leaving the way free. The unit automati-

cally resets when it powers up again, which means staff do not have to manually reconfigure each barrier when the emergency is over.

## Advantages

- functional, fast and space-saving
- unit opens even under pressure
- version with fold-down arms and automatic reset
- sturdy versions for outdoor installation
- motor-driven versions for easy use

### Fields of application

- Stadiums and sports facilities
- Swimming pools and thermal baths
- Gyms and fitness centres
- Amusement and theme parks
- Ski-lifts
- Exhibition centres and trade fairs
- Zoos
- Museums
- Casinos
- Public transport

# HTS half-height turnstiles

This functional turnstile is notable for its attractive stainless steel housing, ergonomically shaped for an optimised flow of visitors. The double unit provides a space saving solution thanks to its interlocking turnstile columns. Two different column sizes are available: either with three or with four rows of crossbars. Due to their stylish design these units are a favourite for entrance areas to swimming pools, spas and fitness centres.

## Advantages

- attractive design for stylish entrance areas
- all-over stainless steel finish
- space-saving double unit
- smooth, silent operation
- available with 3 or 4 rows of crossbars

## Fields of application

- Swimming pools and thermal baths
- Gyms and fitness centres
- Stadiums and sport facilities
- Amusement and theme parks
- Exhibition centres and trade fairs
- Zoos
- Museums
- Casinos
- Public sanitary facilities

# HSG Half-height Sensor Gates

This unit consists of a sensor-controlled passageway with automatic sliding doors, which drive with a swift arch motion in the housing to let a person pass through. This allows for easy, quick and contactless access. Straight after someone passes through, the doors close again automatically to prevent unauthorised entry. At the same time, the unique sensor system guarantees a high level of protection for pedestrians: it detects pedestrians accurately, preventing lesions caused by the sliding panels.

## Advantages

- unique protective sensor system: V-shaped sensor strips for highest pedestrian safety + vertical light grid for single file access
- high throughput rate
- easy, swift passage
- no contact with the panels
- high level of user acceptance

## Fields of application

- Public transport
- Exhibition centres
- Thermal baths and pools
- Gyms and fitness centres
- Museums

# FTS full-height turnstiles

## Fields of application

- Stadiums and sports facilities
- Swimming pools
- Amusement and theme parks
- Zoos
- Open-air museums
- Bike parks

These units are particularly suited to secure public facilities with higher security requirements, such as football stadiums or venues for large events, as well as for perimeter protection around open-air pools.

Full-height turnstiles provide an optimum level of single-file access, together with the necessary sturdiness, as the units are mostly installed outdoors. Versions with three or four wings are available in a variety of designs.

## Advantages

- functional, sturdy and weather-proof
- optimum regulation of single passage (with a minimum of staff supervision)
- patented end-point locking system prevents being locked in
- particularly space-saving as double unit
- turnstile column and bars made of stainless steel
- motor-driven versions
- versions with lockable shutters as protection against vandalism
- versions with integrated bike gate
- modular system: combinations of a variety of turnstile bars, roof elements, guiding and side panels possible

# A smart solution for any entrance

Quick, sturdy and user-friendly - TPB tripod barriers manage admission to a stadium

An automatic swing door beside the tripod barrier provides access for people with reduced mobility

Reader and coin-collection can be integrated in the base columns tripod barrier

Access to the pool area: a stylish solution with HTS half-height turnstiles

Sophisticated solution for stadiums - the FTS-L02 turnstile features lockable shutters to protect the reader and the unit against vandalism after the match:  
... with shutters open

... with shutters closed
