

## Success Story SAP - B-COMM for R/3 ERP

Sedus Stoll AG, Waldshut / Germany

### High reliability is top priority

Sedus Stoll AG is one of the leading furniture manufacturers in Europe. The focal point of its range of products lies in the field of office swivel chairs and table systems. The headquarters has been in Waldshut/Dogern in Southern Germany since 1871. Sedus has five additional production facilities in Germany, France, Italy, Great Britain and Austria. Sedus products are sold in over 30 countries worldwide.

Excellent products for satisfied customers - that is Sedus Stoll's motto. Exceptional quality, safety and value-for-money are the principles on which Sedus operates - from a product's conception to its production. Sedus products result from the highest demands made of workers, materials, and development and production systems. Whether R&D, Production, or Sales, the entire company meets the requirements of the EN ISO 9001 standard. These values are evident in Sedus Stoll's quality-management system, which guarantees a mature way of working and an exemplary standard of products.

Sedus Stoll also sets a high value on ecology. Sedus Stoll is particularly proud of the fact that in 1995, their Waldshut/Dogern factory was the first manufacturer of office furniture and seating in Germany to be awarded the European Eco-Certificate.

A company that places great importance on quality also claims this from its suppliers. Sedus Stoll's old time recording hardware was not reliable enough and needed to be replaced. Therefore, Sedus Stoll started looking for a new Time and Attendance subsystem in the course of their SAP HR implementation. "In the past we had bad experiences with unreliable systems. The reliability of the entire system was one of the most important factors for us. The new system was to be integrated into the existing environment. TCP/IP was a prerequisite and group works as an individual solution was also required" explains Martin Ebner, Organization Programmer at Sedus Stoll. After the company had compared different quotes, Sedus Stoll decided in favor of Kaba Benzing. "During the implementation of HR, SAP highly recommended Kaba Benzing to us. Other arguments in favor of Kaba Benzing were its company size, its close proximity, and their sales rep who was always knowledgeable and helped us in every possible way" says Martin Ebner.

Sedus Stoll did not regret their decision. The system runs smoothly. "The system is completely reliable and high reliability is essential with a couple of hundred employees", emphasizes Martin Ebner.

The administrative building in Dogern has already been equipped with an Access Control system, and now the new development building will also be equipped with such a system.

*"During the implementation of HR, SAP highly recommended Kaba Benzing to us."*

*"The system is completely reliable and high reliability is essential with a couple of hundred employees."*
