Products «Made in Germany»
All you should know
We at Kaba GmbH are a traditional and successful manufacturer of products for Enterprise Data Collection. We deliberately rely on Germany as a location for business. From here, we supply to the traditional markets for time and attendance, shop floor data collection and access control in Europe and overseas. Continuous innovations made us to the technologically leading provider of products and components in these markets.

A constant focus on innovation, market and customers is an essential part of our corporate culture and the basis for what we do as a successful company.

The benchmark of our products has always been a very high degree of quality and innovation as well as functionality right from the start.

As a company, we pursue the ideas of the Excellence philosophy as part of our corporate strategy. This takes into account people, processes and results in an integrated manner with the goal of always offering you, the customer, a solution that matches your requirements.

In the process, we focus not only on a sub-aspect but also that you, the customer, perceive us as a whole. With the implementation of business excellence, we want to create a culture and environment that promotes continuous improvement and places the customer at the heart of our activities.

How the term «Made in Germany» has developed
"Made in Germany" owes its existence to a British law, the Merchandise Marks Act 1887. The purpose of this act was to protect the British consumers so that they were not mistaken about the origin of imported German goods. The negative interpretation of the «Made in Germany» soon became the opposite, a special quality mark.
Integrated processes
Before a product leaves our company and is delivered to you, it must undergo the whole bandwidth of modern development, production and quality processes. Our SAP system integrates these business processes making them transparent and reproducible. We also consistently use planning and control instruments to reduce delivery times, increase our flexibility and be able to offer you a higher quality at a reasonable price.

Product marketing
We find ideas for new products. Extensive research of technology, use and benefit to find market specifications for the realization of a new product.

Development
More than 30% of our employees work in research and development. They have consolidated and broad know-how, and the use of up-to-date technologies and working materials as well as comprehensive documentation allows us to develop products which set new benchmarks on the relevant markets.

Enterprise resource planning
Enterprise resource planning, with purchase being a part of it, is especially important. We need to find suppliers with international quality certificates, whose products comply with the prescribed standards, such as RoHS. When the goods are received, they are checked to see whether they meet our quality requirements. Our sophisticated ERP system ensures that components are at the right place at the right time.

Production
Kaba products are manufactured using modern production techniques and processes. This includes computer-based SMD loading and automatic, optical inspection AOI in the production of printed circuit boards and assemblies. In the additional in-circuit test, all printed circuit boards are checked for correct functioning. Electronic components are artificially aged in climate chambers to guarantee a long service life of the products in use. Products are assembled by our employees according to certified processes. In the final test, each product is checked for correct functioning, and the results are documented and archived. Employees confirm the proper production process by means of a quality stamp in the order documentation.

Quality management
We were the first on the market to have our processes certified to the quality standard ISO 9001. Since then, a sophisticated QA system for the entire production process ensures that our products fully comply with the quality term «Made in Germany». Of course, we comply with legal regulations such as RoHS, WEEE, REACH or ErP. A certification of our products to the standards CE and UL underlines this claim. The communication software for ERP systems, such as SAP, is also certified.

Business management
As internationally acting company, business management joins all activities to market our products successfully. This includes, in particular, a market-compliant pricing, informing our customers about new products, and complaint management. Our employees are on site to analyze the possibilities of use and to modify the Kaba products to match country-specific circumstances.

Above all, we rely on our committed employees and their knowledge. They make sure that the quality issues get their specified significance in the work processes. Our production site is in Germany and our goal is products «Made in Germany». For us, this is a synonym for performance, quality and reliability.

Convince yourself - we show you a large product range for time and attendance, shop floor data collection, and access control “Made in Germany”

Time and attendance - time is money
This saying is still true. This is why an effective time and attendance is an absolute must in any company. Collecting the company attendance simply, quickly, and conveniently on ergonomically designed terminals and transfer them for further processing.

You just choose the appropriate time and attendance terminal for your requirements, and then you can forget the subject time and attendance for a long time. As a matter-of-fact, our terminals are fail-safe and durable and will do their job reliably for many years to come.

Shop floor data collection - secure your competitive edge
Companies that examine and constantly optimize cost structures and production sequences thanks to the use of modern shop floor data collection acquire a competitive edge and thus the prerequisite of a successful existence.

By collecting and evaluating the many levels of the shop floor data, you open an important source of information. All relevant data with regard to personal, order-related or company-related events have to be collected and analyzed.

We make sure that you can use SFDC as the basis of increasing your productivity; therefore, we offer you a wide range of powerful SFDC terminals, components, and services.

Access control - to let you know “who-when-where”
Who has access where, when, and for how long? This question is answered by our holistic solution to access control. Assign a defined group of persons access authorization with time restrictions for certain buildings, rooms or other areas and play it safe.

We offer you a multi-faceted product portfolio of access control managers, terminals, readers, components, and communication solutions. All products can be intelligently combined, ranging from networked access control to integration into ERP systems.
