- 5 booking terminals
B-Net 93 20
- 3 multifunction terminals
B-Net 95 80

Dailycer

Dailycer is one of the leading European manufacturers of private label breakfast cereals and cereal bars. Dailycer has joined the Cereals Holding Group, founded in 2008 and incorporating seven production sites in Germany, the United Kingdom, France, the Netherlands and Switzerland. They are thus the first manufacturer to offer its customers the full technology and all the finished products available on the market.

The sharing of the expertise and procedures among the factories makes it possible to guarantee customer service through transfers that can be performed between production centers. The company has 460 employees on 3 sites in France and a total of 1,900 employees in Europe.

As part of the updating of the HR systems and products, the HR management solution has been entirely reconsidered in order to offer an efficient high-performance Human Resources Information System.

Interview with Mr. Michel LENOBLE, IT-Manager at Dailycer, who reports:

In 2000, we started the project to reorganize our HR information system, focusing on the integration of Payroll, TAM and Administration Management in one single solution.

We have chosen a new HRIS on Oracle database from SAGES Software, since its PANDORE software is a global solution meeting all our requirements.

As a long-standing partner of Kaba, SAGES Software proposed to use Kaba Time and Attendance terminals for updating our Time Management System, and this scalable, long-term solution won us over.

«A recommendation of Kaba products to Dailycer by SAGES Software has led to a long-term partnership between all parties.»

Today, Kaba terminals in combination with the PANDORE software enable employees to easily access, by means of a badge, their personal daily management information (daily working hours, balance of paid leave and working time reduction...

Since 2008, the SAGES Software - Kaba solution has opened up the development of an e-HR system in PANDORE for employees vacation requests using a decentralized approach.

This simplification made it possible to control the request workflow and processing of absences as close to the employee as possible, thus optimizing work scheduling.

«The Kaba - SAGES Software solution provides total reliability and confidence in the HR data transfer.»

SAGES Software

For more than 25 years, developer and integrator of the modular solution PANDORE, specializing in Time, Access, Payroll and HR Management for companies from 200 to 5,000 employees. www.sages-software.com

In order to guarantee the coherence and processing of leave requests in PANDORE, bookings are made on a Kaba B-Net 95 80 terminal, allowing employees without a computer workstation to request leave to their supervisor, for example.

The B-Net 95 80 terminals have been installed in the break rooms and staff lounges to guarantee an efficient management as close to the employees as possible.

In order to comply with Dailycer`s wish to simplify the collection of data by employees and more particularly by production staff, SAGES Software has developed a touch user interface, enabling secure and easy data collection on the Kaba B-Net 95 80 terminals.

The employees can also consult their personal data (records of paid leave and working time reduction, planned absences, posted absences, ..etc).

The system`s strong point is the real-time availability of all this data for the HR Management at Dailycer. After studies in the company, Dailycer noticed that the employees used the Kaba terminals more frequently for collection or consultation than the computers at their workstations. This confirmed Dailycer in its decision on an overall installation of the terminals on all sites.

This was performed internally with the help of external specialists for the physical and technical integration of the B-Net 95 80 terminals in the Dailycer environment.

As part of the strong partnership between the Dailycer IT department and the SAGES Software team, the installation of the PANDORE solution has been implemented by combining on-site and remote services in order to optimize installation time and to guarantee the operational maintenance of the system.

To ensure service continuity in case of major incidents, we have provided ourselves with the materials needed to guarantee total availability of the solution in our production department.

In summary, the choice of SAGES Software showed that the reliability of the PANDORE - Kaba solution since 2000 was real.

«A high reliability in the transfer and processing of information»

The quality and the processing of HR data are essential for our company; the Kaba - PANDORE solution provides total data transfer reliability.

Both on the hardware and software side, we have never had any data transfer problems or loss of data.

The availability and reliability level is real and the user-friendly access to data via the B-Net 95 80 terminals is very much appreciated by the Dailycer staff.

«Setting-up of a reliable and efficient partnership»

The partnership between SAGES Software and Kaba is the result of a long-standing cooperation, providing a real benefit to any customer looking for a homogeneous and user-friendly solution. The availability and security are other important points of this alliance.

In conclusion, Kaba offers technologically advanced solutions that are open to other environments. All products developed by the Kaba group are recognized for their high quality.
