# Success Story

## HAKA KUNZ GmbH, Waldenbuch

«The most important thing was that SAP and time recording would run smoothly together.»

«Our project team liked Kaba Benzing the best. We were immediately convinced.»

«The Kaba Benzing system runs as a «Black-Box». It's installed, set-up and the solution is ready-to-go.»

Joachim Scholz  
Project Manager

### **Kaba Benzing installed, set-up and ready-to-go!**

In 1946 "NEUTRALSEIFE" (neutral soap) was invented and the foundation laid for HAKA KUNZ. NEUTRALSEIFE is a paste-like general-purpose cleaner for all jobs in a household. Due to the great success of NEUTRALSEIFE the company grew bigger and bigger. Today the HAKA KUNZ product range includes the entire household supply with hypoallergenic body care products as well as detergents and cleansing agents which are easy on the environment.

HAKA KUNZ has replaced the LOGA payroll system by SAP R/3 HR in 1993. Initially only with negative time recording in SAP R/3 HR, that is that all employees were credited with their target time day by day. Attendance times were recorded with time clocks and absent times were written down by hand and evaluated manually. Entering all data into the LOGA payroll system was very time-consuming.

«In 1994 we started to survey the market. We were planning on replacing the old system. There were two alternative solutions: A temporary solution with time recording as isolated application without SAP or to do time recording via HR right from the start. remembers Joachim Scholz, Project Manager.

HAKA KUNZ simply asked SAP which company would be able to offer a qualified solution for time recording with SAP R/3 HR and were among others referred to Kaba Benzing. «Our project team liked Kaba Benzing the best. We were immediately convinced. The close vicinity was very appealing.»

Joachim Scholz sums up the requirements: «Our new system needed to be able to replace the complicated manual time recording, to incorporate access control, and to relieve the locking system with a yard gate control. But the most important thing for us was that SAP and time recording would be able to interact smoothly.»

«Kaba Benzing is a system that runs as a «Black-Box». It's installed, set-up and the solution is ready-to-go. The best thing about it is that it's nothing special. Set it up and it will run. B-COMM for R/3 ERP runs in the background and reliably delivers data. It's much simpler than the old time clock solution which is no longer conceivable.», describes Joachim Scholz.
